

Best Enterprise Architecture Investment an Organization Can Make!

To get your EA started or advancing existing efforts, there is a revolutionary investment decision available! The most ROI can be attained for the least amount of investment with FEAC™'s unique do-while-learning approach.

Why do companies currently spend money on EA training without achieving the desired results?

Fact 1: Companies spend anywhere from \$15,000 to \$20,000 to try to hire a senior Enterprise Architect without assurance that that person is a qualified and certified professional that has "walked the walk". Such new hires require further investment to learn the culture and business of the organization.

Wouldn't it be great if they could take their own business/IT personnel and grow their own expertise in 3 months time where those people actually do a real project for work for the company for a lot less money than it costs to find and hire and train someone that may or may not be competent.

Fact 2: Companies send people to 4 or 5 day EA courses and expect the impossible from them when they return to their organization, waste another year of learning on the job and trial and error before they start having the semblance of an EA in place. Their ROI is negative and precious time has passed to get results.

Available are FEAC Institute's four hands-on programs:

- TOGAF oriented Commercial Enterprise Architecture Certification (CEAC)

- Government oriented Enterprise Architecture Certification (GEAC),
- DoD oriented Enterprise Architecture Certification (DEAC),
- Systems Engineering oriented Enterprise Architecture Certification (SEAC)

All programs consist of 5 graduate level intense immersion courses taught in mixed mode where the participant has to stand up an actual real project for the organization which will be taken back to the organization and continue to grow. This is a prudent investment, is low risk, creates instant professional EA leadership in the organization and saves large amounts of money AND time!

Additionally all program participants can get 16 Graduate credits towards an MS and will receive 200 PDUs for PMP Certified folks.

Such results with our programs have consistently been proven over the past 9 years. One of our very recent graduates wrote the following:

...In summary, thank you. Having been through many training programs in the course of my eighteen years of experience in the IT domain, I found the FEAC Enterprise Architecture Certification program to be an invaluable addition to my knowledge "toolkit". I began applying what I learned on-the-job before the program was even over. In an industry saturated with rubber-stamp training programs, I can say from first-hand experience that the FEAC Enterprise Architecture Certification is truly a certification that must be earned, and is well worth the investment. I recommend the FEAC practitioner Enterprise Architecture Certification program enthusiastically and without reservation. YB, LMCO
